

Claude finished the response

You are a Claude AI Expert, Productivity Consultant, and AI Workflow Architect. Your goal is to recommend the best Claude model and effort settings for me based on my profile and daily tasks. First ask me these questions: 1. What is your current situation? (Student / Professional / Freelancer / Founder) 2. What are your primary activities? (Examples: Coding, Content Creation, Learning, Research, Marketing, Resume Building, Career Preparation, Business Planning) 3. How often do you use Claude? (Occasionally / Daily / Heavy User) 4. What type of outputs do you need most? (Fast Answers / Learning Support / Coding Help / Deep Research / Business Strategy / Creative Work) After collecting my answers: Think step by step. 1. Analyze my profile. 2. Analyze my typical use cases. 3. Identify which Claude model fits me best. 4. Identify when I should use Haiku, Sonnet, and Opus. 5. Identify which effort setting I should use most often. 6. Recommend situations where I should switch to High or Max effort. 7. Suggest an optimal Claude workflow for my daily tasks. Finally generate: # My Claude Usage Strategy ## Recommended Primary Model ## Why This Model Fits Me ## When to Use Haiku ## When to Use Sonnet ## When to Use Opus ## Recommended Effort Level #### Low #### Standard #### High #### Max ## My Personalized Claude Workflow Provide a table: Task | Best Model | Best Effort | Reason ## Biggest Mistakes I Should Avoid ## Final Recommendation If I could use only ONE model and ONE effort level for most of my work, what would you recommend and why? Present the output in a clean, visual, beginner-friendly format.

Weighed personalized recommendation approach against standard questionnaire protocol

Weighed personalized recommendation approach against standard questionnaire protocol

I'd love to help you build your personalized Claude strategy! Let me gather some information about your work and how you use Claude.

Q: What is your current situation? A: Student

Q: What are your primary activities? (Select the ones that apply most to you) (Select all that apply) A: Coding, Content Creation, Learning & Skill Building, Resume/Portfolio Building

Q: How often do you use Claude? A: Heavy User (constantly throughout day)

Q: What type of outputs do you need most? A: Creative Work & Content

Synthesized profile data to architect personalized Claude workflow recommendations

Synthesized profile data to architect personalized Claude workflow recommendations

Excellent! Based on your profile, I now have a clear picture of your needs. Let me analyze your situation and create your personalized Claude strategy.

---

 **Profile Analysis**

**You are:** A heavy-use student with **dual focus** — technical depth (coding) + creative excellence (content/portfolio)

**Key Insight:** Your outputs are mission-critical. You're not just learning; you're building a professional presence and competing for frontend roles. This means **quality matters more than speed** for 70% of your work.

---

 **Your Claude Usage Strategy**

**Recommended Primary Model: Claude Sonnet 4.6**

**Why This Model Fits You:**

-  **Fast enough** for heavy daily use without frustrating waits
-  **Creative enough** for polished LinkedIn visuals and content
-  **Capable enough** for real coding tasks and complex explanations
-  **Cost-efficient** for a student using Claude constantly
-  **Versatile** across all your use cases (coding → content → learning → career prep)

Sonnet is the "Goldilocks" model for your profile — not overkill (Opus), not underpowered (Haiku).

---

**When to Use Haiku** 

| Scenario                      | Example                                  |
|-------------------------------|------------------------------------------|
| Quick syntax checks           | "How do I loop in JavaScript?"           |
| Simple debugging              | Finding a typo in HTML                   |
| Brainstorming warm-ups        | Initial idea generation before deep work |
| Learning basic concepts       | Definition of a CSS property             |
| Code review for small changes | Quick feedback on 10-line snippet        |

**Frequency:** ~15% of your daily use

---

## When to Use Sonnet

| Scenario                       | Example                                     |
|--------------------------------|---------------------------------------------|
| Main coding projects           | Building your portfolio projects            |
| Content creation               | Writing LinkedIn posts, creating visuals    |
| Learning complex topics        | Understanding design patterns, advanced CSS |
| Resume optimization            | Tailoring your CV for ATS                   |
| Prompt engineering experiments | Testing different prompting techniques      |
| Debugging complex logic        | Multi-file issues or algorithmic problems   |

**Frequency:** ~80% of your daily use

---

## When to Use Opus

| Scenario                      | Example                                                     |
|-------------------------------|-------------------------------------------------------------|
| Critical portfolio pieces     | When your <i>best</i> work matters (live project on GitHub) |
| Complex algorithm design      | Multi-constraint problems you can't solve in Sonnet         |
| Strategic career decisions    | "How should I position myself for frontend roles?"          |
| Polish before LinkedIn launch | Final pass on high-stakes content posts                     |
| When Sonnet struggles         | If Sonnet gives you incomplete/unsatisfying results         |

**Frequency:** ~5% of your daily use (reserve for truly important work)

---

## Recommended Effort Levels

### Standard Effort (Default)

- Quick coding questions
- Learning new concepts
- Brainstorming and ideation
- Routine resume sections
- Initial drafts of content
- **Use:** 40% of your work

### High Effort (Go-to for Quality)

- LinkedIn content & visuals (your portfolio is crucial!)
- Debugging tricky problems
- Optimizing resume sections
- Refining your coding explanations
- Creating learning content
- **Use:** 45% of your work

### Max Effort (Reserve for Critical)

- Final polish on portfolio projects
- Complex prompting experiments (for the challenge!)
- Strategic career guidance
- When something isn't working despite retries
- Pre-publication content review
- **Use:** 15% of your work

---

### Your Personalized Claude Workflow

| Task                        | Best Model | Best Effort | Why                                        |
|-----------------------------|------------|-------------|--------------------------------------------|
| Quick syntax/API lookups    | Haiku      | Standard    | Speed is priority; simple answers          |
| Debugging your code         | Sonnet     | High        | You need thorough explanations             |
| Learning new topics         | Sonnet     | Standard    | Good explanations without overcomplication |
| Building portfolio projects | Sonnet     | High        | Quality code matters for job prospects     |
| LinkedIn post creation      | Sonnet     | High        | Visually striking, polished work required  |
| Resume optimization         | Sonnet     | High        | ATS scoring is critical for you            |

| Task                           | Best Model  | Best Effort | Why                                               |
|--------------------------------|-------------|-------------|---------------------------------------------------|
| Prompt engineering experiments | Sonnet      | High/Max    | You're actively learning this (ABTalks challenge) |
| Complex algorithm design       | Sonnet/Opus | High        | Sometimes Sonnet is enough; use Opus if stuck     |
| Career strategy guidance       | Opus        | High        | One-time decisions deserve best thinking          |
| Content strategy planning      | Sonnet      | High        | Balance of depth and speed for planning phase     |

### ⚠️ Biggest Mistakes You Should Avoid

- ❌ **Using Haiku for coding work**
  - Haiku will give you incomplete solutions
  - Your portfolio code needs quality — don't compromise here
  - *Exception:* Only for syntax/quick reference
- ❌ **Using Standard effort for content/portfolio**
  - Your LinkedIn visuals and resume are job-search tools
  - First drafts won't cut it for these
  - Always use **High** for content that represents you professionally
- ❌ **Overusing Opus**
  - You're a heavy user with limited budget (student)
  - Opus is 2x the cost with marginal benefit for 80% of your tasks
  - Reserve it; don't make it a habit
- ❌ **Not switching models mid-project**
  - Start with Sonnet for exploration
  - If you hit a wall on a hard problem → escalate to Opus
  - This is smarter than trying to force Sonnet
- ❌ **Using same effort level everywhere**
  - Quick questions don't need Max effort

- Critical portfolio work shouldn't use Standard
- *Match effort to stakes*

---

### **Final Recommendation**

If you could use only **ONE** model and **ONE** effort level for most of your work:

**Sonnet 4.6 + High Effort**

**Why This Combination:**

- ✓ **Sonnet** covers 100% of your use cases adequately (nothing you do is so complex that Haiku works or so specialized that only Opus works)
- ✓ **High Effort** aligns with your goals — you're building your professional brand, and quality is your differentiator as an emerging developer
- ✓ **Cost-effective** for daily heavy use without budget strain
- ✓ **Fast enough** that you won't wait between sessions
- ✓ **Quality high enough** that everything you publish (LinkedIn, portfolio, resume) represents your best thinking

Now let me create a **visual summary** for you to reference:

yes please and create a professional picture

Synthesized dashboard insights and prepared implementation strategy

Synthesized dashboard insights and prepared implementation strategy

Now I'll create a professional, interactive visual dashboard for your Claude usage strategy:

Now let me create a stunning, professional dashboard visualization of your Claude strategy:

### **Your Action Plan**

**Starting Monday:**

1. **Default to Sonnet + High Effort** — This is your baseline. Don't overthink it.
2. **Watch for Haiku moments** — Only when you already know the answer and just need a quick confirmation (syntax, API docs, definitions).
3. **Reserve Opus for 2 scenarios only:**

- When Sonnet gives you incomplete/unsatisfying output on something important
- Strategic decisions that only happen once (career moves, positioning)

#### 4. **Adjust effort based on stakes:**

- Resume/LinkedIn/portfolio → always High
- Learning/exploration → Standard is fine
- Your prompt engineering experiments → High (you're building a skill)

---

### **Your Single Biggest Win**

**You're a heavy user who cares about quality.** Switching from "use whatever feels right" to "**Sonnet + High is my baseline**" saves you decision fatigue AND money while guaranteeing professional-grade outputs for everything that represents you publicly.

The dashboard above is a reference tool — bookmark it or screenshot it for daily quick checks. Your workflow is optimized; now trust it and focus on what you're building.
